

## Press Release

# OMI Kicks Off 2020 by Introducing Its New Websites

**Madrid - Lisbon, January 20, 2020**

The companies that make up the Iberian Electricity Market Operator (OMI) have launched their new websites to offer users better information service with an updated design.

Carmen Becerril, President of OMEL/OMI, emphasized that *"launching the new OMI websites in 2020 is another step in the process of adapting our markets and services to the platform for 2030 climate action."*

Artur Trindade, President of OMIP/OMI, noted that *"the new websites will provide society at large with more thorough information on the role that electricity markets play in European integration."*

OMI has unified the image and structure of the different websites to facilitate a better browsing experience and to ensure complete, intuitive access to all of its contents, both those of a corporate nature and market results.

The website [grupoomi.eu](http://grupoomi.eu) compiles corporate information on the parent companies (OMEL and OMIP SGPS), the market management companies (OMIE and OMIP SGMR), and our Clearing House and Central Counterparty (OMIClear), as well as OMEL Diversification. Among the elements included on the website are the group's mission, vision, and values, along with its policies and its commitment to sustainability.

The webpage [omie.es](http://omie.es) now has new features that provide users with easy access to all of the information on our spot market. As a Nominated Electricity Market Operator (NEMO, per European regulations) in Spain and Portugal, OMIE manages one of the most transparent electricity markets in the EU.

Regarding our derivatives markets, [omip.pt](http://omip.pt) and [omiclear.pt](http://omiclear.pt) have also updated their design and content structure to make relevant information on the forward market and the services provided by OMIClear available to all customers and users.

Finally, [omeldiversificacion.es](http://omeldiversificacion.es) includes all of the websites related to bidding on energy products that has concluded, and it will continue to host future bids carried out by OMI in the decarbonization process moving toward 2030.

The new websites may be found at the following addresses:
